

# Touchup Tool for Images

This manual describes touchup utility for image. Composite utility is helpful in touching up/modifying the already generated images. Users can load (or drag and drop) image directory into DrishtiComposite. First image will be automatically loaded as the main image. This can be changed by **Replace Image**.

DrishtiComposite works either in *Transfer Color Mode* or *Transfer Image Mode*.

In image mode, users can make use of other images in the directory to transfer parts on to the main image.

In color mode, users can paint with their choice of color on the main image. The color can be changed by pressing **Brush Color**.

Key(s)	Description
1/2	switch between transfer Image/Color Mode
Up/Down arrow	Increase/decrease radius
Left/Right arrow	Decrease/increase opacity
Ctrl + 0	Set image magnification to 1
Ctrl + +/-	Increase/decrease image magnification
Alt + s	Save image of current slice.
